

what are your top 4 priorities for 21st Century design principles?

vote (place dots here)

variety of learning environments:

-a variety of collaboration zones and areas for small group learning allow for focused attention and the ability to reach all types of learners-

partnerships support positive student outcomes:

-partnering with public & private organizations in the community allows opportunities for real world learning and grows the school community beyond its walls-

technology rich, creative, and collaborative experiences:

-Hands on, technologically advanced, interest based creative, and collaborative experiences allow students and staff to use their imaginations and to experience success daily-

flexibility and adaptability:

-change and evolution in educational approach happens year to year; the project needs to accommodate this to be successful-

sustainability / high performance:

-healthy, comfortable, effective learning environments are vital to the future of our youth. energy conservation and financial sustainability is vital to the future of our Schools

indoor/outdoor connection:

-stretching the classroom to the outdoors provides opportunities for fresh air and an interaction with nature that just can't take place in the classroom-

building as a teaching tool:

-a building that also teaches students about: green features, structural, mechanical, electrical and construction systems adds depth to the learning experience-

school as community center:

-a facility that welcomes in the community creates a greater potential for students to learn, more ownership of the facility, and a feeling of family-
